EXPERIENCE

Senior Software Engineer, Cisco Systems

San Jose, CA | Apr 2022 to Present

- Architected and led a complete rebuild of **Cisco Meraki IoT Radio Settings** over six months, replacing an architecture that locked every Access Point on a network to a single technology with one that lets each Access Point run its own (Bluetooth, Zigbee, or Electronic Shelf Label), deployed across **1,000+ customer IoT networks** while owning **system design, REST APIs, PostgreSQL schema**, and Access Point configuration at **90% test coverage**
- Designed a **data migration service** with **zero downtime** that automatically synced legacy IoT configurations into the new **data model** at network and Access Point level via a **background job queue**, moving the entire customer base over with no service disruption
- Built **RAG-powered AI agents** for two products using **OpenAI** embeddings and a **vector database** for **semantic retrieval**, available through **VSCode/GitHub** IDE integrations and a **Webex bot**, cutting support resolution time **30%** and accelerating new-engineer onboarding across time zones
- Drove the Zigbee **door lock** feature to **General Availability** and integrated third-party **Electronic Shelf Label (ESL)** hardware, opening new **hospitality** and **retail** customer segments
- Built an interactive **Cisco Spaces** web application with **React** and **Mapbox** rendering custom indoor building maps that automatically compute optimal **Access Point placement** across large campuses like airports and universities, cutting deployment from days to minutes and saving **hundreds of thousands in labor costs**

Software Engineer (Contract), Cisco / Webex

San Jose, CA | Oct 2021 to Apr 2022

- Added features to and maintained an internal **Python** diagnostics tool (**Twisted**, **Klein**) that collected and surfaced Webex meeting app logs, speeding root cause analysis during production failures
- Developed an internal tool UI with **React** and **Flask** APIs, containerized via **Docker**, and authored **Java**, **elenium**, and **Appium** automated tests for end to end Webex platform coverage

Full Stack Developer, Sikka.ai

San Jose, CA | Jun 2021 to Oct 2021

- Designed **RESTful** services with **ASP.NET** and **C# MVC** (documented in **Swagger**) and built a **React** UI with interactive Victory chart visualizations for a new **Sikka.ai dental product**, partnering with QA to reduce functional and performance defects

Software Engineer Intern, Lumentum

San Jose, CA | May 2020 to May 2021

- Migrated supplier metrics from Quickbase to **Jira** with **Python**, saving **\$25K per year** in licensing, and automated reporting with **Python** and **AWS SES** that cut staff allocation time **10%**; built a **React** and Python portal feeding live **Tableau** dashboards

EDUCATION

M.S. in Computer Science, California State University, East Bay

Aug 2019 to May 2021

B.E. in Computer Engineering, Savitribai Phule Pune University

Jul 2015 to Jun 2019

SKILLS & CERTIFICATIONS

Languages & Frameworks: Python, JavaScript, TypeScript, Ruby, React, Next.js, Redux, Angular, Node.js, Express, Ruby on Rails, Flask

AI & Data: RAG, agentic AI, OpenAI, Anthropic, LangChain, embeddings, vector databases, semantic search, PostgreSQL, MongoDB

Cloud & Tools: AWS, Oracle Cloud, Docker, Git, Jenkins, CI/CD, Mapbox

Certifications: Software Engineering with Generative AI Agents | Learning AWS for Developers | Machine Learning A-Z
